

Bronz-Glow® Product Data

EVAP-ZAP

Is a high foaming, self rinsing, residential and commercial applied evaporator coil cleaning product. It is non-corrosive, non-toxic, non-flammable, technician safe and an environmentally safe coil cleaning product.

DESCRIPTION: Evap Zap is high foaming aerosol coil cleaner designed specifically for cleaning residential and small commercial evaporator coils. Packaged to provide a product that is easy to handle and manage. This 8 oz aerosol can comes with a 6" application tube. The 6" application tube allows you to pinpoint where you want to apply this product. Poke the application tube inside the face area of a coil and watch the dirt pop out. Using this tube allows you to clean inside the fin pack without having to remove the coil. Impacted dirt impacted in the face area coils become easier to remove. This product helps eliminate mold and bacterial growth on coils when used properly.

Evap Zap is also effective in reducing algae slime and build-up in drain pans, drain lines and "P" Traps. Spray Evap Zap down the drain line, and see it open up. Regular use of Evap Zap aids in maintaining the operating efficiency of air conditioning, refrigeration and ventilation systems. Evap Zap, like Husky Coil Guard and Husky Coil Sheen are safe to use on Bronz-Glow coated coils. Fresh water rinsing is not required when you use Evap-Zap. Apply the product, allow it to foam, then turn on the AC Unit to cool. Allow the condensate to rinse off the coil. Apply Evap Zap in the spring during the start up of cooling and just before cooling season is complete. Evap Zap has been used to clean and rid an automobiles AC system of musty moldy smells when applied properly.

BENEFITS:

- Compatible with Bronz-Glow's coating products.
- Foam removes dirt from and off the coil for a rinse free surface.
- Non-Toxic Cleaning Solution.
- Excellent for coated or un-coated coils / Condensers or Evaporators
- Non-Corrosive, no fumes.
- Technician Safe and easy to use.
- Economical and convenient. 1 can cleans up to a 2.5 ton evaporator coil.
- Saves, Time, and energy. No mess with hoses or pump up sprayers.
